

Bio Terror Bible

EXPOSING THE COMING BIO-TERROR PANDEMIC

BIOTERRORBIBLE.COM: The strange case of Konan Michel Yao and the smuggled Ebola virus is yet another great case study of why the government should always be the first suspect in any terror case, especially one involving bio-terrorism. Aside from having the means, the motive and the opportunity to conduct a major bio-terror attack, they have an unlimited supply of willing, able and blackmailable rouge scientists to choose from. In order to organize, plan, drill and execute a major bio-terror false-flag operation, millions if not hundreds of millions of dollars are needed to blackmail scientists, steal or develop the virus or agent, weaponize it, deliver it, and execute the operation without getting arrested or properly investigated. The sheer logistics, security, communication and cover-up needed before and after the bio-terror attack is so daunting, there is only one suspect (government) even capable of carrying it out.

Title: Winnipeg Researcher Charged With Smuggling Ebola Material Into U.S.

Date: May 13, 2009

Source: [CBC](#)

Abstract: A former researcher at the National Microbiology Lab in Winnipeg is facing charges in the United States after allegedly trying to smuggle genetic material from the Ebola virus across the Manitoba-North Dakota border.

U.S. authorities allege Konan Michel Yao had 22 vials of the substance in the trunk of his car when he tried to cross the border on May 5. He is charged with smuggling merchandise, which carries a maximum penalty of 20 years in prison and a fine of \$250,000 US.

U.S. customs officers allegedly found the vials wrapped in aluminum foil inside a glove and packaged in a plastic bag, along with electrical wires.

In his affidavit, the 42-year-old researcher said he was hired by the Public Health Agency of Canada to work as a PhD fellow at the Winnipeg facility. Yao told officers he was working on a vaccine for the Ebola virus and HIV.

On Jan. 21, his last day at the lab, he said he stole 22 vials, which he described as research vectors, according to the affidavit.

Yao told officers he was taking the vials to his new job with the National Institutes of Health at the Biodefense Research Laboratory in Bethesda, Md., because he didn't want to start from scratch in his research.

Dr. Frank Plummer, the scientific director of the Winnipeg lab, said the genetic material taken was not the full Ebola virus and does not pose a risk to the public.

Plummer said theft has never happened at the lab before. Researchers are reminded they cannot take any lab property without permission, and they sign documents asserting that they know the rules, he said.

The lab is now reviewing its biosecurity protocol.

No public health risk, Canadian health agency says

Lynn Jordheim, the U.S. attorney prosecuting the case, said Yao was not carrying the active viruses. Still, Jordheim said, the allegations against Yao are serious.

"You take it seriously when something like this happens, but this is not the scenario you fear where somebody would be bringing a biological agent across," Jordheim said.

A spokesman with the U.S. Federal Bureau of Investigation's Minnesota office told CBC News on Wednesday that the agency was initially called in to investigate and monitor a terrorist threat, but the threat was assessed and ruled out.

The FBI said U.S. Immigration and Customs Enforcement will be handling the investigation.

The Public Health Agency of Canada said there was never a public health risk, and insisted Yao did not have access to the highest-level pathogens and only worked with non-infectious material.

A spokesperson for the agency confirmed that the accused was a researcher who hadn't worked at the National Microbiology Lab since January.

Yao was born in the Ivory Coast. He studied at Laval University in Quebec and was briefly affiliated with the plant sciences department at the University of Manitoba.

A former supervisor described him as "a normal researcher" ([CBC, 2009](#)).

Title: Former Manitoba Researcher Sentenced

Date: May 22, 2009

Source: [CJOB 68](#)

Abstract: A former researcher at the National Microbiology Laboratory in Winnipeg accused of trying to smuggle genetic material from the Ebola virus across the Manitoba-North Dakota border pleaded guilty to a lesser charge on Friday.

42 year old Konan Michel Yao pleaded guilty to a charge of "failure to present merchandise for inspection." He received a 17 day jail sentence and was fined 500 dollars.. Yao is in the custody of U.S. customs officials and it's not clear if He's returning to Canada.

Yao was caught at the border on May 5 on his way to a new job with the National Institutes of Health at the Biodefense Research Lab in Bethesda, Maryland. He had 22 vials in the trunk of his car that were allegedly taken from the lab.

Yao had initially been hired by the Public Health Agency of Canada to work as a PhD fellow at the Winnipeg facility..

The Agency said there was never a public health risk, saying Yao did not have access to the highest-level pathogens and only worked with non-infectious material ([CJOB 68, 2009](#)).
