EXPOSING THE COMING BIO-TERROR PANDEMIC

BIOTERRORBIBLE.COM: The following whitepapers were published by think-tanks, universities, NGO's and various governmental agencies and have at the very minimum set the stage psychologically for the impending bio-terror induced pandemic. The simple fact that these whitepapers exists in mass confirms that an upcoming bio-terror attack is in the cards and may be played in a last ditch effort to regain political, economic and military control of society.

Title: Biological Warfare, Bioterrorism, Biodefence And The Biological And Toxin Weapons Convention

Date: December 15, 1999

Source: [UNESCO](#) United Nations Educational, Scientific and Cultural Organization

Abstract: Biological warfare is the intentional use of micro-organisms, and toxins, generally, of microbial, plant or animal origin to produce disease and/or death in humans, livestock and crops. The attraction for bioweapons in war, and for use in terroristic attacks is attributed to their low production costs, The easy access to a wide range of disease-producing biological agents, their non-detection by routine security systems, and their easy transportation from one location to another are other attractive features. Their properties of invisibility and virtual weightlessness render detection and verification procedures ineffectual and make non-proliferation of such weapons impossibility. Consequently, national security decision-makers defence professionals, and security personnel will increasingly be confronted by biological warfare as it unfolds in the battlefields of the future.

Current concerns regarding the use of bioweapons result from their production for use in the 1991 Gulf War; and from the increasing number of countries that are engaged in the proliferation of such weapons i.e. from about four in the mid-1970s to about 17 today. A similar development has been observed with the proliferation of chemical weapons i.e. from about 4 countries in the recent past to some 20 countries in the mid-1990s.

Other alarming issues are the contamination of the environment resulting from dump burial the use of disease-producing micro-organisms in terroristic attacks on civilian populations; and non-compliance with the 1972 *Biological and Toxins Weapons Convention*. The diverse roles of micro-organisms interacting with humans as "pathogens and pals" has been described with *Leishmania* infections, and with the presence of *Bacteroides thetaiotaomicron* in the intestines of humans and mice. Also the development of "battle strains" of anthrax, bubonic plague, smallpox, Ebola virus, and of a microbe-based "double agent" has been reported ([UNESCO, 1999](#)).
